Ikhlas Attarwala
04-16-19 / Week #3
Class Participation

For class today, I asked & answered a few questions:

- Vamsi and I made a small comment about vanishing gradients being the reason why Mayank said the backpropagation couldn't traverse the whole net.
- With a few friends, we discussed the depth & broadness of a neural net, and then I replied to Harper's question about whether stacking an LSTM referred to depth or broadness.
- I asked what determines which node gets the dropout, but Keith said it was empirically chosen and something we'll learn about next week.
